Variable Coding

- Computer Use: coded from 0 to 6 levels of daily computer use
- Sadness: 0 = No, 1 = Yes
- Sex: 0 = Male, 1 = Female
- Age: recorded in years

Group Definition

- Adolescents aged 12–18 years
- Analyses adjusted for age and sex

Response Variables

- Sadness (binary outcome)
- General Health (self-reported health status)

Method Choice

- Logistic Regression
- Used to examine the association between computer use and sadness while controlling for age and sex

Assumptions Considered

- Independent observations
- Binary outcome variable
- Adequate sample size ($n = 11,923$)
- No severe multicollinearity among predictors
